

IN THE SPECIFICATION:

Amend the paragraph at page 2, lines 20-23 such that it reads as follows:

The mousepad calendar 10 may include a lower backing portion or backing panel 18 which is preferably about the same shape and size as each of the sheets 12, but may be thicker and/or stiffer than the sheets 12 and may be made of, for example, cardboard. The backing portion 18 may be coupled to the lower-most sheet 12 and may include a nonskid portion located on a lower surface thereof.

Amend the paragraph at page 2, line 24 - page 3, line 3 such that it reads as follows:

Each of the sheets 12 may be generally rectangular in top view, and may include rounded corners 22 to prevent a mouse or other loose papers or articles from catching on the corners of the mousepad calendar 10. Each of the sheets 12 may be made of paper, plastic, composites, or nearly any sheet-like material upon which indicia can be printed. Furthermore, each of the sheets 12 may include an anti-static coating 13 located on an upper surface thereof. Alternately, instead of having an anti-static coating, each of the sheets 12 may have additives or materials included therein that reduce the propensity of the sheets to accumulate a static charge, such as by decreasing the resistance of the sheets. Alternately, each of the sheets 12 may be made partially or entirely of an anti-static material. For example, each sheet may have a surface resistivity of between about 500 and about 5000 ohms meter, or between about 500 and 5000 megaohms meter.
